

About Rodan Energy Solutions

MAKING SUSTAINABLE, ATTAINABLE.™

Rodan helps large industrials, utilities, and power producers manage their energy costs and grid-linked revenue across IESO, AESO, NYISO, PJM, and MISO. Founded in 2003, Rodan's scope runs from revenue metering through real-time dispatch to settlement validation. One team is accountable across the chain.

RODAN BY THE NUMBERS

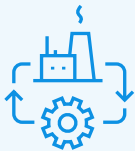

1.5 GW+

flexible capacity under management

750+

facilities managed

225+

utilities, ISOs, and power producers

\$250M+

in annual client energy cost savings

\$200M+

in annual optimized revenue across our DER portfolio

288 MW

cleared in IESO 2026/27 Capacity Auction

WHAT WE DO

RodanIQ

Price forecasts, peak hour predictions, settlement validation, and facility-level analytics. The data layer that traders, energy managers, and settlement teams use to make decisions and catch errors.

RodanOps

Real-time dispatch and demand response program management for industrial loads, batteries, and DERs across five markets. Operations run 24/7 from Rodan's Real-Time Operations Center, with on-site field response across Canada and the northeastern U.S.

Metering & Compliance

Revenue metering, telemetry, and SCADA integration for utilities, ISOs, and large industrial sites. Rodan operates 550+ IESO revenue metering points and provides metering services across Canada, with partner coverage in NYISO, PJM, and MISO.

Energy Optimization Service, powered by FlexOps

Forecasting and dispatch for power producers and BESS owners. Models the asset, the OEM, and the market individually. Risk thresholds, bid bands, and operating limits are set per project, and trades are executed by Rodan's trading desk with the algorithm in support.

Behind-the-Meter BESS Development, powered by RodanDER

Revenue stack modelling, IRR analysis, site selection, and warranty review. EPC oversight runs from procurement through commissioning, with integration into Rodan's Real-Time Operations Center so the asset is dispatching on day one.

GOOD FIT FOR

- Large commercial and industrial energy users looking to reduce their total energy spend
- Power producers and BESS owners who need custom dispatch and optimization to maximize portfolio returns
- Utilities that need revenue metering, telemetry management, or demand response program support
- Developers and IPPs commissioning DERs who need a single accountable operations partner
- Operators with exposure across multiple ISOs who need a single partner across markets

NEXT STEPS

Book a Business Value Assessment. Send your load profile, market participation status, and asset list. Rodan returns a written action plan.
